3.1 General:

either direction to equalize water level and hydrostatic pressure from one side of the foundation to the other. The FV pivoting door is normally held in the closed position by a buoyant release device. When subjected to rising water, the buoyant release device causes the unit to unlatch, allowing the door to rotate out of the way and allow flow When subjected to rising water, the Smart Vent® FVs internal floats are activated, then pivot open to allow flow in
