The elevation of the highest adjacent grade next to the building is feet, NGVD. The elevation of the highest adjacent described above has the lowest floor elevation of feet, NGVD. The elevation of the highest adjacent grade next to the building is feet, NGVD. SECTION III FLOODPROOFING CERTIFICATION (Certification by a Registered Professional Engineer or Architect) I certify to the best of my knowledge, information, and belief, that the building is designed so that the building is watertige and hydrodynamic loads and effects of buoyancy that would be caused by the flood depths, pressures velocities, impact a forces associated with the base flood.	site is
FIRM ZONES V, V1-V30: I certify that the building at the property location described above has the bottom of the lowest floration of at an elevation of feet, NGVD (mean sea level), and the average grade at the building stat an elevation of feet, NGVD. FIRM ZONES A, A99, AH and EMERGENCY PROGRAM: I certify that the building at the property location described above has the floor elevation of feet, NGVD. The elevation of the highest adjacent grade next to the building is feet, NGVD. The elevation of the highest adjacent described above has the lowest floor elevation of feet, NGVD. The elevation of the highest adjacent grade next to the building is feet, NGVD. SECTION III FLOODPROOFING CERTIFICATION (Certification by a Registered Professional Engineer or Architect) I certify to the best of my knowledge, information, and belief, that the building is designed so that the building is waterting and hydrodynamic loads and effects of buoyancy that would be caused by the flood depths, pressures velocities, impact a forces associated with the base flood.	
is at an elevation offeet, NGVD. FIRM ZONES A, A99, AH and EMERGENCY PROGRAM: I certify that the building at the property location described above has to feet, NGVD. The elevation of the highest adjacent grade next to the building is	
FIRM ZONE AO: I certify that the building at the property location described above has the lowest floor elevation of feet, NGVD. The elevation of the highest adjacent grade next to the building is	ding site
FIRM ZONE AO: I certify that the building at the property location described above has the lowest floor elevation of feet, NGVD. The elevation of the highest adjacent grade next to the building is	
FIRM ZONE AO: I certify that the building at the property location described above has the lowest floor elevation of feet, NGVD. The elevation of the highest adjacent grade next to the building is	he lowe
SECTION III FLOODPROOFING CERTIFICATION (Certification by a Registered Professional Engineer or Architect) I certify to the best of my knowledge, information, and belief, that the building is designed so that the building is watertig and hydrodynamic loads and effects of buoyancy that would be caused by the flood depths, pressures velocities, impact a	et, NGV
SECTION III FLOODPROOFING CERTIFICATION (Certification by a Registered Professional Engineer or Architect) I certify to the best of my knowledge, information, and belief, that the building is designed so that the building is waterting and hydrodynamic loads and effects of buoyancy that would be caused by the flood depths, pressures velocities, impact a forces associated with the base flood.	-1
I certify to the best of my knowledge, information, and belief, that the building is designed so that the building is watertig walls substantially impermeable to the passage of water and structural components having the capability of resisting by and hydrodynamic loads and effects of buoyancy that would be caused by the flood depths, pressures velocities, impact a forces associated with the base flood.	-
and hydrodynamic loads and effects of buoyancy that would be caused by the flood depths, pressures velocities, impact a

the cross of flooding, will tris degree of floodbrooting be achieved with home	
YES NO In the event of flooding, will this degree of floodproofing be achieved with human intervention? (Human intervention means that water will enter the building when floods up to the base flood level cur unless measures are taken prior to the flood to prove the flood to pro	oc-
doors and windows).	over
YES NO Will the building be occupied as a residence?	
If the answer to both questions is YES, the floodproofing cannot be credited for rating purposes and the actual lowest floor completed and certified instead. Complete both the elevation and floodproofing certificates.	must be
FIRM ZONES A, A1,-A30, V1-V30, AO and AH:	,
feet, ((NGVD)
